

Mamelodi School - Classroom and Library Extension

FUTUREHOUSE
IKHAYA FUTUREHOUSE SYSTEMS

In 2006 Futurehouse built a classroom at a primary school in Mamelodi which was highly commended by the Department of Education as an alternative construction system for schools. This year we went back to the same school to do an extension to their library building. This is a good example of how the Futurehouse system can be integrated with existing brick and mortar structures and adopt aesthetic elements to match and compliment existing 'conventional' buildings.
