

Mozambique 'Golden Mile' Beach Resort

IKHAYA
FUTUREHOUSE
IKHAYA FUTUREHOUSE SYSTEMS

Easy to collect and transport panels to Mozambique using a trailer. The resort project requires lightweight structures that do not disturb beachfront dunes. The design also uses traditional materials.

Futurehouse panels are used to create a lightweight floor slab which will also provide insulation to the structure.

Panels will then be used for the walls and finished with Futurehouse Skimplast and beach sand to provide a natural looking and durable finish to match the environment.
